Section 1: Full Summary

Front Desk Summary: They are usually the first point of contact. Prospective students interested in taking a program at Red Rock Technical College can inquire through the front desk. Inquires usually consist of getting to know more program information, cohort start dates and if there is availability. If a prospective student shows interest in a program they are handed off to speak with an admissions advisor.

Front Desk Review Notes:

- They have shared Read/Write access to a spreadsheet used within the institution.
- They note that they have access to sensitive student information.
- They note it is currently too hard to filter through the spreadsheet to find what they need for inquiries.
- They note that the hand-off to admissions has no carry forward information so the prospective student typically has to offer up information again.
- They also mention they would like to see a student's current progress in the application process

---

Admissions Advisor Summary: An admissions advisor's role is to get the prospective student who is looking to apply to get all necessary documentation into the spreadsheet for the support coordinator. They start the process by emailing the applicant a form in survey monkey to fill out. When they receive the email back they enter a new row into the spreadsheet for the prospective student. The admissions advisor sends the applicant another email if additional required documents are required for the program they have chosen. Students can skip the accuplacer if their SAT/ACT scores meet the requirements, if they don't the advisor sends them to the testing center. The testing center sends back an email verification email if the student passes. After receiving all the student information, gathering required documents, and showing the student passed off the accuplacer requirements, the advisor submits the prospective student's application to the Support Coordinator for review.

Admissions Advisor Review Notes:

- The admissions advisor notes that they have too much access in the spreadsheet and would like to see less.
- Uses a SurveyMonkey form to collect student information.
- Receives an email from the testing center when a student passes the accuplacer test.
- Loses track of a student's application status after they have been handed off to the Support Coordinator because they only hold responsibility during advising and the application.
- Builds out a dashboard for executive members that tracks number of applicants, number accepted, cohort enrolled capacity, and graduated. Uses the institutional spreadsheet to do this.

Testing Center Summary: Students that don't opt of accuplacer testing reach out to the testing center to schedule a test by phone, email or drop-in. The testing center thinks it sends the student a google calendar invite but isn't sure. The testing center does check IDs before allowing them to test. Scores are not stored outside of accuplacer. The testing center only sends a confirmation to the application advisor if the student has successfully passed the accuplacer test. If the student needs to retake the test, there is a waiting period if they fail the test 3 times. If the student has an ADA requirement, the testing center usually is made aware through the ADA Coordinator.

Testing Center Review Notes:

- There is no online scheduling
- Isn't sure if the student receives an email confirmation of the date the test is scheduled
- Noted that sometimes scores are entered incorrectly
- Admissions said that sometimes emails are not always received

---

Support Coordinator Summary: Takes on responsibility for the applicant after a hand off from admissions. Admissions does this by sending an email notifying the application is complete. The Support Coordinator checks the application starting with test scores and required documentation. They then check if there are extra steps in the program for enrollment. Finally they check if there is availability for the applicant in the program. If there is no capacity in the cohort, the student gets waitlisted. If there is, the applicant is accepted into the program and sent an email. They have two weeks to get tuition paid and confirm their seat. The support coordinator will do follow-ups through email to try and lock the student in if they have had no response. If the student hasn't paid tuition and confirmed their seat two weeks before the cohort starts, they are removed from their seat and it is offered to the longest standing applicant in the waitlist. The Support Coordinator monitors student progress through the rest of the student's academic life cycle until a student outcome is reached. Lastly, they send a student outcome email to admissions.

Support Coordinator Review Notes:

- Tracks student progress (attendance and academic progress) in a separate spreadsheet outside the institution spreadsheet.
- Mentioned that when there is a student outcome that they are supposed to update records and notify admissions but that it doesn't always happen.
- Student records are kept on file but nobody tracks it and there is no note on how long they should be maintained
- Waitlist students typically get notified too late or not at all and seats go unfulfilled
- Mentions that the spreadsheet has too many editors at once
- Also noted that they've seen users with access to sensitive student information that shouldn't have it

---

Registrar Review Notes:

- Needs Read/Write access to tables with program, cohort, and sessions for building
- There was mention that the support coordinator only finds out that an applicant can't be enrolled into a program because they have not paid their tuition. This creates confusion as to whose responsibility it is to enroll a student. (my assumption was the support coordinator)

Section 2: Bottlenecks and Problems

Institutional		
ID	**Problem/Suggestion/Bottleneck**	**Response**
RR.1	Shared spreadsheet with read/write access	Build a CRM with Read/Write access to users based on what they need.
RR.2	Sensitive information	Student demographics containing sensitive information should only be given access to users who need it through permissions (profiles)
RR.3	Ownership	There is an institutional issue with ownership. A process needs to be put into place that helps create accountability for prospective students, applicants, and students.
RR.4	Record retention	Records should have definable rules on how long they should be kept on file or archived. We can probably look this up in Utah law and see how long each type of file or form should be kept.

Front Desk		
ID	**Problem/Suggestion/Bottleneck**	**Response**
FD.1	Read access only	Front Desk only needs read access to anything in the CRM.
FD.2	Create quick filtered view	The front desk needs a view with faster access to programs and cohort information.
FD.3	Application status	A view that provides limited information for the front desk pertaining to a prospective student's application status
FD.4	Hand-off for Admissions	A simplified inquiry form with basic information that the front desk has the student fill out before speaking with them. This will help both them and admissions if the student wishes to speak to them about applying.

Admissions Advisor		
ID	**Problem/Suggestion/Bottleneck**	**Response**
AA.1	Email admissions form	Admissions needs a form that is on a webpage for the applicant to apply in. This should have sign-on access so they can come back to it and finish any required documents and not allow submission without all required fields filled out.
AA.2	Application status	Same as Front Desk request - A view that provides limited information for the front desk pertaining to a prospective student's application status
AA.3	Needs automation	There should be automation in this role for forms, information collection, tasks, emails, and pre-disqualifiers.
AA.4	Data tracking	Data not currently being tracked that would be useful for a dashboard
AA.5	Reporting	Needs a dashboard for executive team that provides reporting data

Testing Center		
ID	**Problem/Suggestion/Bottleneck**	**Response**
TC.1	Scheduling	Scheduling is a manual process with the testing

		center using a calendar to schedule. This should be a booking stead with a limited number of seats, it should also include the ability for a student to mark if they need ADA accommodations.
TC.2	No online scheduling	Again, because it is a manual process, it does not have the ability to be booked online.
TC.3	Automation with training	The testing center needs more support. Some automation with scheduling and test scores should be given to help with this.

Support Coordinator		
ID	**Problem/Suggestion/Bottleneck**	**Response**
SC.1	Applicant hand off	Applications should have required fields that need filled out before they are received.
SC.2	Academic and attendance trackers	Even though they are tracking this separately there should be a connection to the students file that is easily accessible for those that have the right role.
SC.3	Waitlisted student process	It sounds like there is an issue with getting students that are waitlisted into a program. We should explore what options could be done differently here.
SC.4	Spreadsheet access	Clients would like to make access to information limited to what the user needs to see and that edit access won't be cross contaminated.
SC.5	No tuition visibility	The support coordinator only finds out that tuition has not been paid when the registrar has an issue with enrolling the student in a course

Section 3: Outstanding Questions

Q1: Who builds the Program Cohort Sessions? (Registrar is the assumed guess)

Q2.a: Does Admissions send students to the testing center or how do they know they need to go there?

Q2.b: Does Admissions check the sat/act scores before sending students to the testing center?

Q3: Does the testing center send admissions notification if the student was put on the waiting period list?

Q4: Need to provide a list of Student Demographics and have help marking which fields and forms would be considered Sensitive Student Information.

Q5: I need confirmation that the Registrar is who enrolls the student into the program. It seems this is a task that is better handed off to the Support Coordinator as long as they gain access to be notified a student has paid tuition.
